### Curriculum Development

1. CHEM 105 (Winter 2014), a freshman seminar focused on The Hope and Hype of Nanotechnology, had as their final project to construct a video describing a concept in nanoscience. Student Joshua Kim and team made a terrific video called "What Color is Gold?"  
<https://www.youtube.com/watch?v=7LCUVbSx1C8>
2. CHEM 102 (Winter 2010) integrated several aspects of technology into freshmen chemistry, including Lecture Capture, Clickers, Document Camera, and Voice-over Worked Problems (ProfCast). A video showing the use of the technology plus student interviews can be found [here](#). Aspects were also highlighted in a newsletter by Northwestern University's Information Technology (NUIT)  
[http://www.it.northwestern.edu/ecomunicator/2010\\_winter/faculty/lecturecap.html](http://www.it.northwestern.edu/ecomunicator/2010_winter/faculty/lecturecap.html)
3. CHEM 250 was funded by an NSF-Nanotechnology in Undergraduate Education Award. This research-based course was two quarters and designed for freshman and sophomores. Video-lab modules were developed and can be found at: [http://www.nanoed.org/courses/nano\\_experiments\\_menu.html](http://www.nanoed.org/courses/nano_experiments_menu.html).
4. GEN-LA 395-21 was developed in response to a call from the Dean of WCAS to design *Junior Seminars*. Ours was one of three selected for the inaugural year, and the only science one. This lab-based course in nanotechnology had sophomores and juniors from chemistry, biology, English, and materials science.
5. CHEM 445 was designed for advanced undergraduates and graduate students and had instrumentation training so students could obtain training on sophisticated nanoscale instrumentation. A Hewlett Award for Innovations in Undergraduate Teaching was used to fund these nano-training activities.
6. Other courses benefited from the seminars and workshops attended as a Searle Fellow (2004) as part of the Searle Center for Excellence in Teaching.
7. I have contributed two chapters to different books in Nanoscale Education on the design of research-based courses in nanotechnology.

### Research Experience for Teachers (RET) Program

Program Director for RET Program for NSEC, 2003, 2004, 2005

Program Director for RET Program for MRSEC, 2003

### High School Teachers and Students

Every year since 2004, a high school teacher (previously an RET participant) and his students from New Trier High School visit the lab for a half day symposium. This field trip consists of presentations from my graduate students as well as tours of our lab and the facilities in Cook Hall. In 2006, we tested some of our benchtop nanoscale experiments with the high school students. We have hosted students every year since 2007, where we continue to test benchtop nanoscale experiments with high school teachers from New Trier.

### Tutorials and Workshops for Scientists and Engineers

Every year since 2003, I have given tutorials on the synthesis and assembly of nanowires and nanotubes through the ASME Nano Bootcamp program. I have also been invited to give tutorials on the synthesis and characterization of nanostructures and nanofabrication as part of the NSF Summer Institute at Northwestern in 2005 and 2006. Seminars on "Introduction to Nanofabrication" are also presented to high school teachers and REU students as part of my participation in the NCLT in 2005 and 2006.
